DETAILED ACTION

1. Claims 1, 3-11 and 46-53 are currently pending in this Office Action.

Allowable Subject Matter

2. Claims 1, 3-11 and 46-53 are now renumbered as 1-18 and these claims are allowed.
3. The following is an examiner's statement of reasons for allowance:

Regarding claims 1, 3-8 and 52, the prior art fails to disclose or make obvious the claimed method performed by one or more server devices, the method comprising, in addition to the other recited features of the claims, the features of receiving, at one or more processors of the one or more server devices, a query from a client device that includes one or more terms; determining whether the query is a commercial query by determining whether the one or more terms of the query, in any particular order, matches a commercial query pattern in a list of commercial query patterns, where the list of commercial query patterns includes patterns associated with one or more host names or domain names that include more than a particular number of hyphens, and identifying the query as a commercial query matches the commercial query pattern in the list of commercial query patterns; processing the query in a first processing manner when the query is not determined to be a commercial query, where processing the query in the first processing manner includes ranking documents in a first ranking manner; and processing the query in a second, different processing manner in response to determining that the query is a commercial query, where processing the query in the second processing manner includes ranking documents in a second, different ranking manner in the manner recited in claim 1.

Regarding claims 9 and 46-47, the prior art fails to disclose or make obvious the claimed computer-implemented system comprising, in addition to the other recited features of the claims, means for receiving one or more queries that each includes one or more terms; means for identifying whether each query of the one or more queries is a commercial query, where the means for identifying includes means for determining whether a subset of the one or more terms of each query in the one or more queries is included in a list of commercial query patterns, where the list of commercial query patterns includes patterns generated from one or more host names or domain names that include more than a particular number of hyphens, and means for identifying one of the queries in the one or more queries as a commercial query when a subset of the one or more terms of the one of the queries is included in the list of commercial query patterns; and means for processing each query in the one or more queries based at least in part on the identifying, where the means for processing each query in the one or more queries based at least in part on the identifying includes means for ranking documents in a first manner when the query is not identified as commercial and means for ranking documents in a second, different manner when the query is identified as commercial in the manner recited in claim 9.

Regarding claims 10, 48-49 and 53, the prior art fails to disclose or make obvious the claimed system comprising, in addition to the other recited features of the claims, a memory to store instructions; and a processor to execute the instructions to receive a query that includes one or more terms, identify whether the query is commercial by determining whether the one or more terms of the query, in any particular order, matches a commercial query pattern in a list of commercial query patterns, where the list of commercial query patterns includes patterns associated with one or more host names or domain names that include more than a particular

number of hyphens, and identifying the query as a commercial query when the one or more terms of the query, in any particular order, matches the commercial query pattern in the list of commercial query patterns, and process the query; rank document in a first manner when the query is not identified as commercial; and rank document in a second, different manner when the query is identified as commercial in the manner recited in claim 10.

Regarding claims 11 and 50-51, the prior art fails to disclose or make obvious the claimed computer-readable storage medium containing instructions for controlling at least one processor to perform a method for processing a search query that includes a plurality of terms, the method comprising, in addition to the other recited features of the claims, the features of identifying whether the search query is a commercial query by determining whether a subset of the plurality of terms of the search query is included in a list of commercial query patterns, where the list of commercial query patterns includes a patterns generated from one or more host names or domain names that include more than a particular number of hyphens, and identifying the search query as a commercial query when the subset of the plurality of terms of the search query is included in the list of commercial query patterns; and processing the search query based at least in part on whether the search query is a commercial, where processing the search query based at least in part on whether the search query is a commercial query or a non-commercial query includes ranking documents in a first manner when the search query is identified as commercial and ranking documents in a second, different manner when the search query is not identified as commercial in the manner recited in claim 11.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
